

# LittleGIANT®

**August 30, 2022**

When providing clean water systems pumps, performance and efficiency have been two features that you can count on when using Franklin Electric's Little Giant pump products. That's why we're excited to announce the transition of our Little Giant 4" diameter submersible clean water systems pump line to a new and enhanced hydraulic design. The new pumps have been re-engineered using the latest techniques in material and hydraulic sciences and have been designed to exceed all industry standards for quality manufacturing processes and operational safety. The new 4" submersible pumps will continue to offer:

- Top grade materials of construction, such as 300 grade stainless steel components and engineered composite thermoplastics
- Industry-standard NEMA motor connection bracket produced with proven, reliable, and durable materials
- 1 ¼-inch NPT threaded discharge connection with built in no-return check valve
- Pump hydraulics driven by a stainless steel, 7/16-inch hex, shaft with a rigid top bearing and splined motor coupling for maximum power distribution efficiency
- Output performance that is equal or better at nearly all application points

To help facilitate a faster and smoother roll-out, the new Little Giant 4" submersible pumps are each matched one to one against the current Little Giant product line. This also means that the available flow and power rating will continue to be 5, 8, 12, 16, and 22 GPM with horsepower ranges from ½ through 5. The update will also not cause any changes in list pricing.

The new products will be rolled out over time as inventories of the current pumps run out. This transition is beginning now and means that on any one order there is a chance we could ship a mix of the two product lines, but since they are considered a direct replacement there should be no concern selling either to the marketplace. Cross-references are available, as well as updated catalog pages which feature the new pump performance curves.

Our hope is that this transition is relatively seamless for you and your customers, but if you have questions please reach out to your representative from Little Giant at any time.

Best regards,

**Jeff Frank**
